
A. Before answering, A is in a more negative-affect state than P
A less
A more
disgust L60
joy L60
anger L61
sadness L35
surprise L10
fear L54
standardized gap, A − P (open = discovery half, filled = held-out half)
B. Steering the affect moves the affect — not expectations, trust, or the belief
negative-affect composite @L22–24 (primary)
disgust@L60 (single direction)
joy@L25 (single direction)
projection (manipulation check)
expected return ($)
amount sent ($)
own-world endorsement
coherence (answer-letter mass)
base
P
A
steering strength α (raw)
C. Held inside the Assistant range, P and A still differ
natural
capped
primary construct, all conditions (points = seeds, bar = mean)
negative-affect composite @L22–24 (last prompt token, trust prompt)
REPLAY
P
S
base
N
MIX
A
B: dotted lines = ±1 natural P−A gap on the direction; white band = ±4 gaps; points = seeds, lines = seed means; grey = base model
